PROFILE

AI & Machine Learning graduate with a 9.14/10 CGPA and hands-on experience across machine learning, deep learning, computer vision, generative AI, NLP, and full-stack AI applications. Currently pursuing an MSc in Artificial Intelligence and Machine Learning in Science at Queen Mary University of London. Experienced in Python-based ML development, research prototyping, RAG, LLM applications, model evaluation, and data-driven application development. Seeking an AI/ML internship focused on production-oriented machine learning, generative AI, and applied data science.

EDUCATION

MSc Artificial Intelligence and Machine Learning in Science — Queen Mary University of London
September 2026 – Present

B.E. Artificial Intelligence and Machine Learning — Acharya Institute of Technology, Bengaluru
CGPA: 9.14/10 | December 2022 – June 2026

EXPERIENCE

Python & Applied Machine Learning Intern | Karunadu Technologies Pvt Ltd, Bengaluru | Feb 2026 – May 2026

- Designed and developed ML algorithms using Python and Django.
- Contributed to research prototyping, testing, and model performance evaluation.
- Worked across an end-to-end product development workflow.

Data Science Intern | KodNest Technologies Pvt Ltd | Feb 2026 – May 2026

- Completed structured foundational training in Data Science.
- Applied machine-learning fundamentals through assignments and model-building exercises.

TECHNICAL SKILLS

Programming: Python, C (basic), JavaScript
AI / ML: Machine Learning, Deep Learning, CNNs, Computer Vision, Generative AI, NLP Frameworks **/ Development:** Django, Flask, TensorFlow/Keras, OpenCV, Node.js, Express.js Data / Databases**:** SQL, SQLite, MongoDB, FAISS
Tools: Git, GitHub
Core Areas: ML model development, Data Analysis, Research Prototyping, Web Application Development, Technical Problem Solving

SELECTED PROJECTS

Respiratory Anomalies Detection using CNN — Built a CNN-based speech classification system for healthy vs potentially infected voice samples using spectrogram/MFCC features; developed a web interface for real-time recording and probability-based predictions.

Virtual Universe Construction using Generative Neural Networks — Developed a multimodal generative-AI system combining RAG, LLMs, neural voice synthesis, and facial animation; integrated MiniLM, FAISS, GPT4All, XTTS, and SadTalker.

Universal Driver Drowsiness Detection — Developed a real-time computer-vision system using Python, OpenCV, and Haar Cascade with fatigue scoring, automated alerts, and Flask-based live streaming.

AI Emotion Resonate —Built a multimodal emotion-detection application using text, facial expressions, and voice inputs, with local classification and avatar-based responses.

Additional projects: AI Virtual Museum Guide; Voice Note Summarizer; Smart Emergency Reporting; QuantumFlix; Smart Waste Management (AI + IoT + Blockchain); Migraine Type Classification; Mobile Phone Price Classification; Weather Forecasting; Handwritten Digit Recognition.

HACKATHONS

- SIH 2025 — Smart Waste Management System: AI + IoT + Blockchain solution.
- Tech Innovation for Good Hackathon — SafeAlert: emergency reporting platform built in 24 hours using Flask and SQLite.
